Focus: China's manufacturing continues to struggle

20 January 2012

**Focus:** The release of the HSBC Flash PMI data this morning confirmed that manufacturing in China continues to struggle. The HSBC PMI manufacturing index printed 48.8 for January, from 48.7 in December. This index is biased towards the highly externalised smaller firms in China. With European exports constituting 17% of China's total exports, the data also reflects an export sector which continues to struggle.

- Another weak, sub-50, reading for the HSBC Manufacturing Flash PMI and a stronger dollar have combined to weigh on the base metals complex this morning. With China heading off on holiday, volumes have remained subdued, with the focus of the market for the next week shifting more towards the US markets.
- This morning gold has resumed its fall, taking the rest of the precious metals along with it. Once again, the threat of dwindling physical demand as China celebrates the Lunar New Year is curbing participants enthusiasm in the metal. With physical demand providing little support, the dollar continues to largely dictate movements in gold and consequently precious metals.
- The oil market rallied modestly during the early trading session yesterday, prompted by a stronger euro. However, the strength soon faded as geopolitical risks eased. Gasoline crack weakened following a hefty inventory build reported by the DOE. By contrast, heating oil cracks strengthened, also driven by the DOE report. The term structure for Brent was firmer yesterday after the recent slide, which might have bottomed out due to low crude inventories globally.

### Focus: China's manufacturing continues to struggle

The release of the HSBC Flash PMI data this morning confirmed that manufacturing in China continues to struggle. The HSBC PMI manufacturing index printed 48.8 for January, from 48.7 in December. This index is biased towards the highly externalised smaller firms in China. With European exports constituting 17% of China's total exports, the data also reflects an export sector which continues to struggle.

But we believe that the problem is greater than just Europe. As pointed out in our note "*A view from China: commodity trip notes*" dated 7 Dec'11, it appears that many Chinese businesses have gone into "lockdown" mode, with a strong focus on cash preservation. The reasons are multiple, including sluggish exports, tight monetary policy, and great policy uncertainty. Given this background, we find it hard to imagine China's economic growth being very strong in the next few months.

The reluctance of firms to expand would be consistent with today's data and also recent data such as the official Chinese PMI manufacturing data for December where not only the headline number is weak, but sub-indices showed a build in final products, a decline in employment, and a fall in order books and export demand.

While many commodities have experienced a strong price rally the past few days, the underlying physical market has, however, been left far behind. For example, as pointed out in the Focus in our *Commodities Daily* note yesterday, the chasm between futures prices and physical activity in copper seems to

China manufacturing PMI

Sources: CFLP, NBS

be growing ever wider.

When the official China PMI data for January is released in two weeks time, based on seasonality, we would not be surprised to see the index remaining largely flat, if not pushing lower again. We expect the same for February, irrespective of any monetary stimulus that may be implemented by the PBOC in the next few weeks. The monetary transmission mechanism takes time to filter through to the rest of the economy.

We maintain that it is too early to expect real demand for industrial metals to improve.

### Base Metals

Another weak, sub-50, reading for the HSBC Manufacturing Flash PMI and a stronger dollar have combined to weigh on the base metals complex this morning. With China heading off on holiday, volumes have remained subdued, with the focus of the market for the next week shifting more towards the US markets.

China has seemingly shied away from an RRR cut for now. The recent run of slowing, albeit better than expected economic data, and perhaps because it doesn't want its actions to be perceived by the wider market as a change in policy, have instead seen the PBoC opt to use reverse repos to help shore up short-term liquidity issues at banks and reduce interbank lending rates. Another interesting aspect to Chinese monetary policy, and one which has a significant impact on commodities, is to what extent the CNY continues to appreciate against the dollar. The spot CNY rate is now back where it was towards the middle of December and is some 0.7% weaker against the dollar than where it started the year. The pressure on Chinese companies exporting goods to Europe and the US are likely to intensify further over the coming months. In that regard, it will be interesting to see how the CNY strength evolves and to what extent China looks to boost domestic consumption of goods to offset those weaker export markets.

Copper has come under fairly heavy selling pressure this morning, with weak Chinese data and a stronger dollar seeing prices fall below \$8,300 ahead of US trade. Inventory-wise, SHFE copper stocks climbed 11,193 mt this morning to 131,645 mt, though South Korea did see a fresh 1,000 mt increase in LME cancelled warrants.

Aluminium also saw large warrant cancellations this morning, with on-warrant stocks falling 95,750 mt. The focus has however switched away from Vlissingen and back towards Detroit, where cancelled warrants jumped 98,525 mt. Cancelled warrants at Detroit are now 359,925 mt, or just over 26% of total inventory at that location. By way of comparison, cancelled warrants at Vlissingen are 480,500 mt which is 51% of the total inventory currently held there.

## Precious metals

Despite a weakening dollar yesterday, precious metals came under pressure in the afternoon as investors anticipated lacklustre Asian demand. Better-than-expected jobless claims data (352k, consensus: 384k) might have also bolstered sentiment, reducing the appeal of safe-haven assets. While activity in Asian markets was subdued, as anticipated, precious metals managed to hold their ground, mostly trading in relatively tight ranges. With Chinese buyers now away for next week, we could see gold struggle to maintain current levels. Encouragingly, we are seeing some Indian buying coming through, although this could easily evaporate if the rupee weakens, given the current price sensitivity of the country's buyers.

This morning gold has resumed its fall, taking the rest of the precious metals along with it. Once again, the threat of dwindling physical demand as China celebrates the Lunar New Year is curbing participants enthusiasm in the metal. With physical demand providing little support, the dollar continues to largely dictate movements in gold and consequently precious metals. A return of risk aversion this morning (as evidenced by weaker European equities) has seen the dollar strengthen, putting downward pressure on the complex. US equity futures are currently in the red, which points to continued dollar interest with the accompanying precious metals weakness.

Not much in terms of data flow, although General Electric's Q4:11 earnings report could prompt some reaction in markets, as the company is considered a bellweather of the US economy.

Gold support is at \$1,640 and \$1,634. Resistance is \$1,662 and \$1,677. Silver support is at \$30.25 and \$30.05, resistance is at \$30.77 and \$31.08.

Platinum support is at \$1,500 and \$1,494, resistance is at \$1,527 and \$1,547. Palladium support is at \$663 and resistance at \$680.

## Energy

The oil market rallied modestly during the early trading session yesterday, prompted by a stronger euro. However, the strength soon faded as geopolitical risks eased. Gasoline crack weakened following a hefty inventory build reported by the DOE. By contrast, heating oil cracks strengthened, also driven by the DOE report. The term structure for Brent was firmer yesterday after the recent slide, which might have bottomed out due to low crude inventories globally.

The DOE reported US weekly oil inventory changes for crude/gasoline/distillates at -3.4/+3.7/+0.4mb w/w. Crude inventories at Cushing fell sharply, by 0.8mmbbl, which has pushed the WTI structure much firmer, especially further down the curve. The fall in crude inventories appeared to be driven by a sharp fall in imports, which again is most likely to be part of year-end fluctuation caused by accounting issues. The total US refinery utilisation rate fell by 1.9%, while demand for both gasoline and distillates fell by 355kb/d and 191kb/d respectively, on a four-week running average basis.

Following a number of successful Eurozone bond auctions, the euro has broken the upper bound resistance of the downward channel established since November. There are tentative signs that the euro might halt from further decline, pending the ongoing negotiation over Greek debt. The equity market has also been boosted by the euro optimism and better-than-expected economic data from the US. In fact, US weekly initial jobless claims has fallen to its lowest level since mid-2008.

Our view of the past few days remains—we expect further downward correction in oil prices in the short term. This should be prompted by an easing geopolitical situation in the Middle East, a soft physical oil market and an upcoming spring refinery maintenance season in the northern hemisphere. That said, fundamentals remain fairly solid in the medium term for the oil market due to tight supply and low inventories.
